

Module **VW2CNC** generates CNC-code based of constructions in **VectorWorks**.

Its often a problem to generate CNC-code for old CNC-machines without a comfortable CAD/CAM-software. When you use VectorWorks then VW2CNC may be a solution to generate CNC-code directly out of your CAD-system.

VW2CNC is e.g. in use at a customer having an old **WEEKE-machine with WOODWOP 2.5**, where VW2CNC directly generates the MPR-files with the contours defined in VectorWorks.

VW2CNC can also generate **FMC-format for IMAWOP** or **NCAD** or any direct **CNC-format for any machine/control**.
